

# The Water JPI

Joint Programming Initiative  
Water Challenges for a Changing World

**One Health Initiatives and Funding Opportunities**

Lisa Sheils  
Environmental Protection Agency  
(EPA)

# What is all about ?

- The overall aim of the Joint Programming process is to **pool national research efforts** in order to make **better use** of Europe's public R&D resources and to tackle **common European challenges** more effectively in a few key areas.
- It is an initiative of European Member States and the European Commission that dates from 2008.

# 10 JPis since 2008

Water Challenges for a Changing World

Healthy and Productive Seas and Oceans

More Years, Better Lives - The Potential and Challenges of Demographic Change

Antimicrobial Resistance- The Microbial Challenge - An Emerging Threat to Human Health

Connecting Climate Knowledge for Europe

Global Urban Challenges, Joint European Solutions

Agriculture, Food Security and Climate Change

Cultural Heritage and Global Change: A New Challenge for Europe

A Healthy Diet for a Healthy Life

Alzheimer and other Neurodegenerative Diseases

EU Joint Programme - Neurodegenerative Disease Research

# Joint Programming

- The ten JPIs were established with the aims to:
  - **Respond to societal challenges through joint and targeted research and innovation strategies, programmes and activities on a transnational level**
  - **Better coordinate and integrate national research and innovation planning, policies, strategies and programmes for selected challenges**

# 10 years of JPIs

<https://www.youtube.com/watch?v=9KQ0Sd6AVQ8&feature=youtu.be>

# Joint Programming

- The attractiveness of Joint Programming lies in its structured and strategic process, whereby
  - Member States voluntarily agree to work in partnership towards common visions that are
  - encapsulated in Strategic Research and Innovation Agendas (SRIAs) and
  - implemented through joint actions.

**Water**

**JPI**

# Water Challenges Keywords:

*Scarcity, stress, pollution, management, reuse.*

Water, the first mineral resource to be exhausted on the blue planet

# Sustainable Development Goals (SDGs)

## Water is cross cutting

**1 NO POVERTY**

Fundamental role of water

**2 NO HUNGER**

70% of all water use

**3 GOOD HEALTH**

Water-borne diseases 1.5M deaths/y

**4 QUALITY EDUCATION**

Education links closely to water and health etc

**5 GENDER EQUALITY**

Much gender disparity exists around water

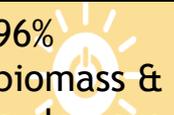

**6 CLEAN WATER AND SANITATION**

**7 RENEWABLE ENERGY**

96% biomass & hydropower

**8 GOOD JOBS AND ECONOMIC GROWTH**

Water's role is fundamental to economy

**9 INNOVATION AND INFRASTRUCTURE**

Water infrastructure is essential

**10 REDUCED INEQUALITIES**

Water and healthy environment for all

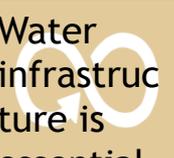

**11 SUSTAINABLE CITIES AND COMMUNITIES**

Water services and clean environment is essential

**12 RESPONSIBLE CONSUMPTION**

Water infrastructure is essential

**13 CLIMATE ACTION**

Most energy is transmitted by water

**14 LIFE BELOW WATER**

Aquatic ecosystems

**15 LIFE ON LAND**

Key role of water

**16 PEACE AND JUSTICE**

Water has many functions

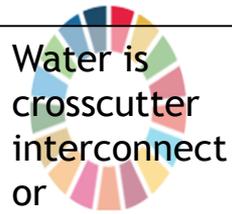

**17 PARTNERSHIPS FOR THE GOALS**

Water is involved and important

Water is crosscutter interconnect or multiplier

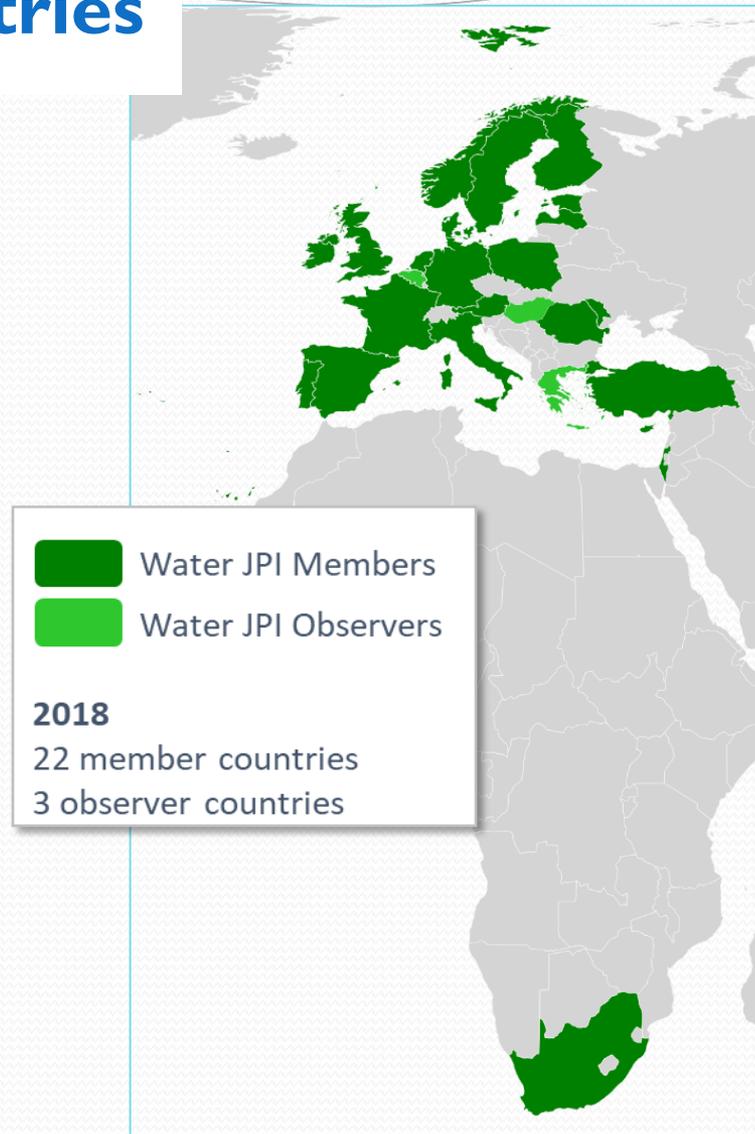

**THE GLOBAL GOALS**  
For Sustainable Development

# Water JPI Member Countries

Water JPI partners currently represent **88%** of the **European National Public RDI investment on Water**

Coordination, Secretarial and Chairing  
MINECO (ES) 2011-2014  
ANR (FR) 2015-2018  
Ireland (IE) Dr Padraic Larkin Co-Chair

**Vision:** Global  
Challenge & Strategic  
Research Areas (10-  
Year Forward  
Looking)

**Strategic Research &  
Innovation Agenda**  
(5-year Roadmap)

**Implementation  
Plan** (3-year  
Work Plan)

**Joint Actions**

# What is the Vision?

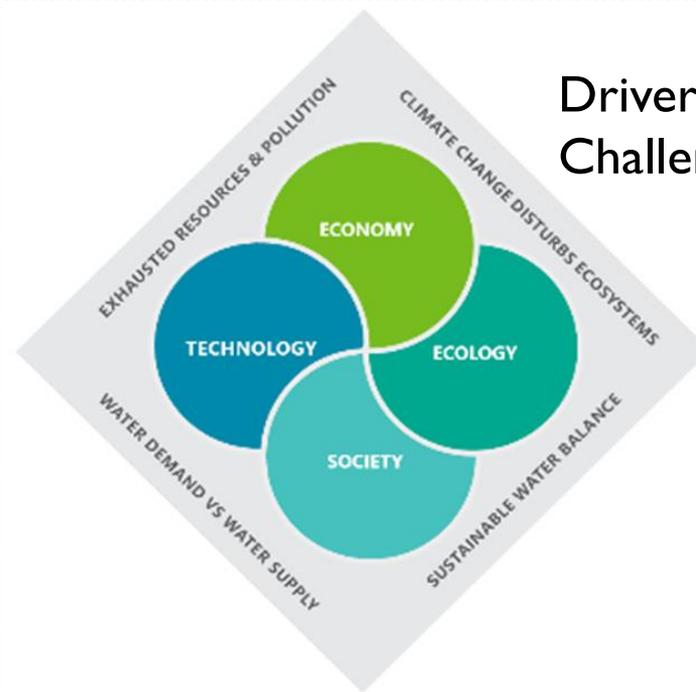

- **Context (trends, drivers and challenges)** - Outlines the **JPI objectives and research questions** responding to the issues and challenges facing the European water sector.
- **Overarching roadmap** that outlines what needs to be achieved and sets the context for all other Water JPI activities.

# Water JPI Vision 2020

*Achieving Sustainable Water Systems for a Sustainable Economy in Europe and Abroad*

Drivers and Multidisciplinary Challenges

# JPI Objectives & Indicators

Involving water end-users for effective RDI results uptake

Attaining critical mass of research programmes

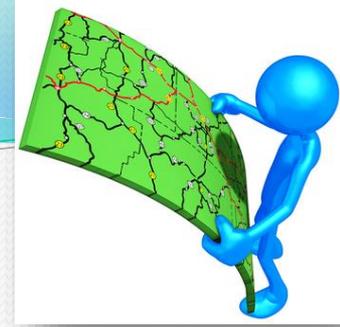

Reaching effective, sustainable coordination of European water RDI

Harmonising National water RDI agendas in Partner Countries

Harmonising National water RDI activities in Partner Countries

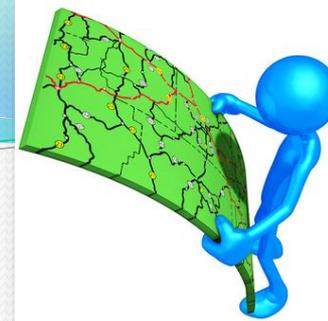

Supporting European leadership in science and technology

# What is the SRIA?

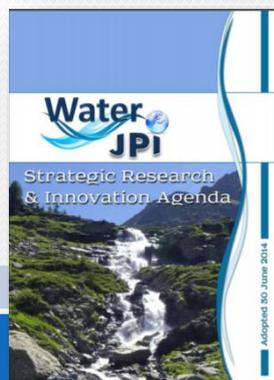

- **Presents and prioritises RDI needs**
- Lays down **guiding principles and identify the policy-relevant research priorities** for the future, while making them openly accessible to the various stakeholder groups
- **Roadmap for future water-related RDI actions in Europe** including, but not only limited to, the Water JPI actions. Water JPI covers the full range of RDI including the broad range of activities **from academic research to innovation.**

2013

2014

2016

2016

Water JPI Project - Predicting in-lake responses to change using real time models (PROGNOS)	Eleanor Jennings DKiT
Eutro-SED: Eutrophication hotspots resulting from biogeochemical transformations and bioavailability of phosphorus in the fluvial suspended sediment of geologically contrasting agricultural catchments	David O Connor TCD

### Water JPI 2016 Joint Call:

Sustainable management of water resources in agriculture, forestry & freshwater aquaculture sectors: increasing the efficiency and resilience of water uses; monitoring and reducing soil and water pollution; and integrating social and economic dimensions into the sustainable management and governance of water resources

#### ABAWARE: Advanced Biotechnology for Intensive Freshwater Aquaculture Wastewater Reuse

##### Project Description

Aquaculture is estimated to be the fastest-growing area of food production in the world and must be developed in a responsible and sustainable way. The rapid growth of intensive aquaculture systems has already caused damage affecting both the environment and human health. This water pollution in some cases can prove deadly for certain aquatic species and indirectly constitute a danger to human population via contaminated fishes and water. Members of this consortium have identified the role of aquaculture as reservoirs of antibiotic resistance of importance to human health. ABAWARE's main objectives are to develop and implement innovative technologies for the monitoring of surface and groundwater bodies for effective integrated water and waste management in freshwater aquaculture sectors by developing an advanced biotechnology for intensive recirculating aquaculture systems with minimum costs and footprint. To properly measure the effects of such an innovative system we will assess, understand and decrease the environmental risks from freshwater aquaculture to human health and reduce these risks by the implementation of the technology. Thus, providing ways to avoid the risks of eutrophication of rivers and lakes, and propose management approaches for reducing impacts on ecosystem biodiversity and economic sectors. Since these environmental problems and potential solutions concern aspects of human, environmental and animal health, consortium members will implement a multi-channel communication with a wide range of stakeholders and the general public.

*"Dr Fiona Walsh leads a team identifying how novel technology will reduce or remove microbial and antimicrobial resistance pollution while using water as part of the circular economy within sustainable aquaculture. This will reduce or avoid the risks to ecosystem biodiversity and provide increased economic benefits."*  
- Fiona Walsh, Maynooth University

##### Irish Contribution

The Irish project will contribute to the characterisation of microbiomes and antibiotic resistance (pre-intervention) and the impact of the intervention on the microbiome diversity and antibiotic resistance genes present in freshwater aquaculture systems (post-intervention).

- Evaluation of the diversity of the microbiomes and antibiotic resistance genes in freshwater aquaculture systems (pre-intervention) and the impact of the intervention on the microbiome diversity and antibiotic resistance genes present in freshwater aquaculture systems (post-intervention).
- Identification of the impact of a developed advanced biotechnology for intensive recirculating aquaculture system on reduction of the environmental risk of freshwater aquaculture to environmental and human health.

##### Project Details

Research area: Safe Water  
Start date: 20/02/2017  
Duration: 24 months  
End date: 19/02/2019

##### Water JPI Funding Organisations:

- Norway (RCN - Research Council of Norway)
- Ireland (EPA - Environmental Protection Agency)
- Finland (AKA - Academy of Finland)
- Germany (BMEL - Federal Ministry of Agriculture and Food)
- Romania (LEFISCDI)
- Sweden (FORMAS - Swedish Research Council)
- European Commission

Water JPI Funding: €1.072 million  
Coordinator: Norway

##### Project Partners

- Norwegian University of Life Sciences (Norway)
- Maynooth University (Ireland)
- University of Helsinki (Finland)
- Technische Universität Dresden (Germany)
- DPR Systems SLR (Romania)
- Romanian Academy (Romania)
- University of Bucharest (Romania)

##### The Water JPI

is successfully tackled through the isolated effort of individual nationalities. A significant share (more than 70%) of public spending in water research is programmed, executed and evaluated at national level. The aims at developing a coordinated and strategic approach to public innovation funding in Europe.

[www.waterjpi.eu](http://www.waterjpi.eu)

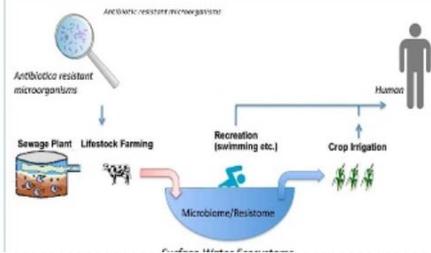

### Water JPI 2013 Joint Pilot Call:

#### Emerging Water Contaminants – Anthropogenic Pollutants and Pathogens

#### TRACE Tracking & assessing the Risk from Antibiotic Resistant genes using Chip technology in surface water

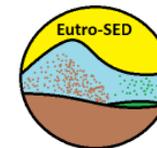

*"The TRACE project calls on an EU multidisciplinary collaborative approach, ensuring a convergence of key knowledge competencies, to address the serious global health issue of ARO in the aquatic environment."*

### Water & FACCE JPI 2016 Joint Call:

Sustainable management of water resources in agriculture, forestry & freshwater aquaculture sectors: increasing the efficiency and resilience of water uses; monitoring and reducing soil and water pollution; and integrating social and economic dimensions into the sustainable management and governance of water resources

#### Eutro-SED: Eutrophication hotspots resulting from biogeochemical transformations and bioavailability of phosphorus in the fluvial suspended sediment of geologically contrasting agricultural catchments

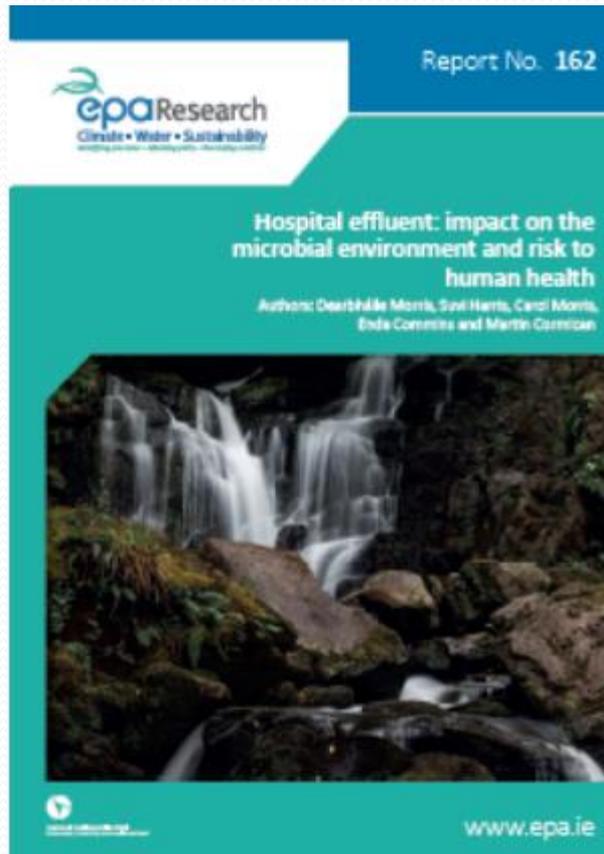

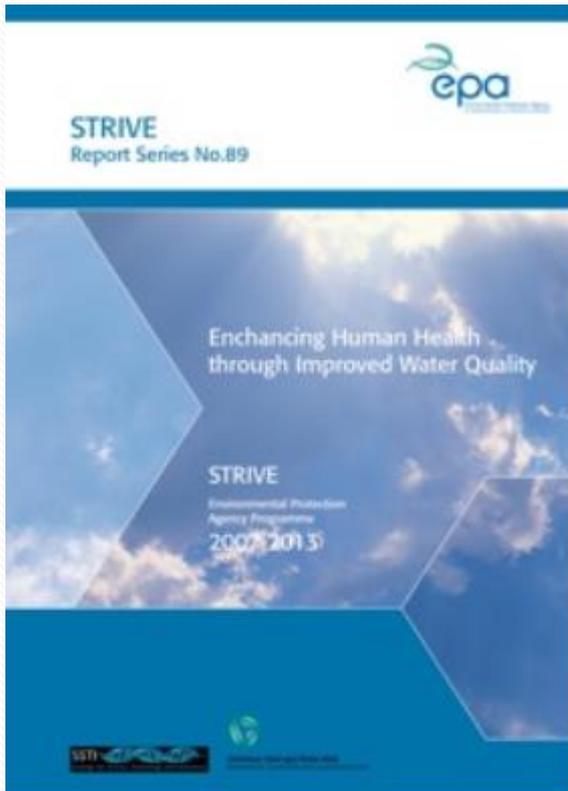

*"Fluvial suspended sediments represent of major mode of phosphorus transport from agricultural catchments with many remaining research gaps relating to the sources, mechanisms of transport, transformation and bioavailability. Eutro-SED endeavours to investigate these issues to enable more informed policy decisions relating to catchment scale phosphorus dynamics for improved freshwater quality."*  
- Dr David O'Connell, Trinity College Dublin

##### Project Description

This project endeavours to address the current lack of understanding of which P fractions on fluvial and stream bed sediments are more bioavailable and degrade water quality, specifically relating to the effect of organic P and humic-metal P complex pools from fluvial sediments. Concurrently, a predictive understanding of biogeochemical transformations and fluxes of fluvial and streambed sediment bound P will be developed and feed into current predictive biogeochemical hydro-sedimentary models for catchment water quality. This lack of data currently represents a major obstacle to the design and implementation of integrated water resources management of agricultural river catchments. The proposal addresses the impact of fluvial and stream bed sediments in agricultural catchment streams on surface water quality as up to 90% of P from agricultural catchments may be in the form of particulate phosphorus on suspended sediments. In addition, the proposal will develop predictive models to simulate potential P loss or the impacts of climate change, land-use and land management practices on fluvial sediment P export. Predictive models appeal to policy makers and water managers as these models can provide solutions to problems under various scenarios quickly.
